EDUCATION

Beihang University (BUAA; Project 985), Beijing, China Sept 2024 – Jun 2027

- M.Eng. in **Mechanical Engineering**; GPA: 90.31/100 (3.80 / 4.00); Class Rank: 2/**13**
- Core Modules: *Intelligent Optimization Methods, Matrix Theory and Applications, Mathematical Statistics, Science Ethics and Academic Specifications*
- Advisors: Prof. Maolin Cai, Prof. Xiaomeng Tong
- Selected Honors:
  - *National Scholarship, Ministry of Education of China* (2026)

Civil Aviation University of China (CAUC), Tianjin, China Sept 2020 – Jun 2024

- B.Eng. in Electronic Information Engineering; GPA: 89.58/100; Departmental Rank: **1/374**
- Core Modules: *Advanced Mathematics A (I, II); Linear Algebra; Probability Theory and Mathematical Statistics; C Programming*
- Selected Honors:
  - *National Scholarship, Ministry of Education of China* (2021, 2022, 2023)
  - "*Top Ten* Outstanding Undergraduates," CAUC (2024)

PUBLICATIONS

Published

- **Shao, S.**, Cai, M., Qu, H., Yu, Q., & Tong, X. (2026). Offline reinforcement learning with heterogeneous graph representation and attention mechanisms for human–machine collaborative flexible job shop scheduling. Computers & Industrial Engineering, 112434. [JCR Q1, IF = 7.3]
- Qu, H., **Shao, S.**, Xu, Y., Cai, M., Shi, Y., & Tong, X. (2026). A global feedback learning-based memetic algorithm for energy-aware scheduling in collaborative heterogeneous flexible job shops. *Swarm and Evolutionary Computation*, 104, 102392. [JCR Q1, IF = 9.6]
- Qu, H., Tong, X., **Shao, S.**, Cai, M., Shi, Y., Ma, Y., & Ning, F. (2026). Collaborative Evolution Guided by Large Language Models for Heterogeneous Flexible Job-Shop Scheduling with Cooperative Units. *Chinese Journal of Mechanical Engineering*, 100374. [JCR Q1, IF = 5.1]

Conference

- **Shao, S.**, Xu, Y., Qu, H., Cai, M., Hu, Y., & Tong, X. (2025, September). AVS-ESA: A multi-objective optimization approach for energy-efficient variable-speed flexible job shop scheduling. In *2025 China Automation Congress (CAC)* (pp. 6750-6755). IEEE.

Under Review

- Qu, H., Ji, J., Xu, S., **Shao, S.**, Sun, X., Han, C., Sun, Z., & Shi, Y. Bias-guided policy search for human–robot collaborative flexible job shop scheduling via deep reinforcement learning. *Journal of Systems Engineering and Electronics*. [JCR Q2, IF = 2.6]

RESEARCH EXPERIENCE

Graph Attention & Offline Reinforcement Learning for Flexible Job-Shop Scheduling Sept 2025 – Jun 2027

M.Eng. Thesis Research Advisors: Prof. M. Cai, Prof. X. Tong

- Tackled factory scheduling when **workers**, not just machines, must be assigned, building a model that decides **which job runs on which machine with which worker** to finish the workload as **early** as possible
- Developed MA-DQUAC, a method that learns from **existing data instead** of repeated trial runs on a real production line, combining a graph network, an attention mechanism, and a technique that keeps the model from becoming overconfident on unfamiliar cases
- **Tested** it against standard approaches including dispatching rules, genetic algorithms, OR-Tools, and existing reinforcement learning, where it produced better schedules, needed less training data, and stayed **reliable** as problems grew larger

LLM-Based Algorithm Generation for Collaborative Workshop Scheduling Feb 2025 – Oct 2025
Research Project Advisors: Prof. M. Cai, Prof. X. Tong

- Extended flexible job-shop scheduling to a heterogeneous setting with collaborative units, reformulating it as a joint operation-sequencing, machine-selection, and unit-assignment problem closer to real **smart manufacturing**
- Built a multi-LLM **framework** (ChatGPT, Claude, Gemini, Qwen, DeepSeek) that automatically **generates** and **evolves** modular components of a **memetic algorithm** — encoding, decoding, operators, local search — via multimodal prompting, AST-based code extraction, and error-feedback repair
- Implemented the full **pipeline** (with *Python*) and ran all experiments (orthogonal, ablation, multi-scale), where the generated algorithm outperformed hand-designed metaheuristics and prior LLM-assisted frameworks (1 registered software copyright)

Quality Prediction & Process Optimization for Aerospace Component Milling Sept 2024 – Jun 2025
Research Project (began as undergraduate thesis) Advisors: Prof. M. Cai, Prof. X. Tong

- Built multi-physics milling **simulations** in HyperMesh/Radioss (geometry from SolidWorks) to generate datasets linking cutting speed, feed rate, and depth-of-cut to surface roughness, cutting force, and vibration
- Trained **ridge-regression surrogate models** as a fast alternative to repeated finite-element simulation, then **coupled** them with NSGA-II for Pareto-optimal process parameters balancing quality, efficiency, and stability
- Ran all simulation and machine-learning reduced-order-model experiments for the project (1 invention patent, CN121413450A; Outstanding Undergraduate **Thesis**, CAUC, 2024)

INDUSTRY EXPERIENCE

Aerfeisi (Jiangsu) Robotics Technology Co., Ltd. Jul 2025 – Sept 2025
Algorithm Engineer (Intern) *Wuxi, China*

- Worked on the chassis control of a mobile robot, computing wheel speeds and steering angles across different drive modes and improving the state-machine switching between them so the robot moved more smoothly and safely (Linux / ROS / C++)
- Helped build a vision-based autonomous navigation pipeline, training a segmentation model to identify drivable areas and obstacles and wiring it into the ROS perception and control modules so the robot could avoid obstacles on its own

EXTRACURRICULARS

- **Executive Director**, Liaison and Exchange Center, Beihang Graduate Student Union: Organized inter-university academic exchange events and coordinated graduate-student liaison activities across the school. Dec 2024 – Dec 2025
- **President**, Innovation and Entrepreneurship Center, Civil Aviation University of China: Led a 30+ member student organization, coordinating university-wide competition teams and undergraduate research-training initiatives. Dec 2022 – Dec 2023
- **Participant**, Summer Academic Exchange Program, ***The Hong Kong Polytechnic University & Hong Kong International Aviation Academy***: Completed a two-week program on aviation engineering and intelligent manufacturing. Jun 2023 – Jul 2023

PATENTS

- Tong, X., Qu, H., **Shao, S.**, & Cai, M. 大语言模型辅助的柔性作业车间调度算法 A large language model-assisted flexible job shop scheduling algorithm. Chinese invention patent application, CN122509527A (Aug 2026).
- Tong, X., Qu, H., **Shao, S.**, & Cai, M. 面向复杂环境柔性作业车间调度方法 A method for flexible job shop scheduling in complex environments. Chinese invention patent application, CN122491726A (Jul 2026).
- Tong, X., Cai, M., **Shao, S.**, & Qu, H. 一种基于离线强化学习的人机协作柔性作业车间调度方法 A method for human–machine collaborative flexible job shop scheduling based on offline reinforcement learning. Chinese invention patent application, CN122155265A (Jun 2026).
- Tong, X., Cai, M., **Shao, S.**, & Fang, M. 一种基于离线强化学习并结合在线微调方法的双臂机器人 A dual-arm robot control method based on offline reinforcement learning and online fine-tuning. Chinese invention patent application, CN122110724A (Jun 2026).
- Tong, X., Liu, Q., **Shao, S.**, & Cai, M. 一种基于深度神经模糊推理系统 A method based on a deep neuro-fuzzy inference system. Chinese invention patent application, CN121413450A (Jan 2026).

- Quan, X., Niu, S., Cai, M., Ning, F., & **Shao, S.** 一种基于 B-rep 自监督学习的制造工艺策略预测方法 A manufacturing process strategy prediction method based on B-rep self-supervised learning. Chinese invention patent (granted), CN119693178B (Nov 2025).
- Cai, M., You, W., Quan, X., Ning, F., & **Shao, S.** 多策略柔性作业车间节能调度方法 A multi-strategy energy-saving scheduling method for flexible job-shop scheduling. Chinese invention patent (granted), CN119847094B (Nov 2025).
- Quan, X., Zhao, X., Cai, M., & **Shao, S.** 基于点云混合驱动的钣金冲压回弹智能预测与补偿方法 An intelligent prediction and compensation method for sheet-metal stamping springback based on point-cloud hybrid driving. Chinese invention patent application, CN120724747A (Sep 2025).
- Du, H., Zhang, X., Liu, Z., & **Shao, S.** 737NG飞机仿真多功能控制显示装置 A multifunctional control display device for 737NG aircraft simulation. Chinese utility model patent (granted), CN221457981U (Aug 2024).
- Dong, L., Chen, X., Yu, Y., Song, H., **Shao, S.**, Gu, Q., Zhi, X., & Wang, W. 一种面向 SPO 模式的智能驾驶辅助系统 An intelligent driving assistance system for SPO mode. Chinese invention patent application, CN115743140A (Mar 2023).

SOFTWARE COPYRIGHTS

SELECTED HONORS & AWARDS

Academic Honors

- **National Scholarship**, Ministry of Education of China (2021, 2022, 2023, 2026)
- First-Class Scholarship: Beihang University (2025); CAUC (2021–2023)
- Outstanding Student Leader: Beihang University (2025, 2026); CAUC (2021–2023)
- SMC Corporation Scholarship (2026) and Hisense Scholarship (2025; sole recipient in the college)
- "Top Ten Outstanding Undergraduates," CAUC (2024)
- Outstanding Graduate of CAUC (2024)
- Outstanding Undergraduate of Tianjin Municipality (2023; sole awardee among 375 peers)
- Innovation & Entrepreneurship Scholarship, CAUC (2022, 2023; ~10 per college annually)

Competition Awards

- Second Prize (**National**), China Undergraduate Mathematical Contest in Modeling — Team **Captain** (2022)
- **National** Undergraduate Electronics Design Contest, Tianjin Division — Team Captain: Second Prize (2022), Third Prize (2021, 2023)
- China International "Internet+" Innovation & Entrepreneurship Competition, Tianjin: **Gold** (7th, 2021), Silver (7th, 2021; 8th, 2022)
- Second Prize, 13th BeiDou-Cup National Youth Science & Technology Innovation Contest, Tianjin Division — Paper Track (2022)
- Second Prize, North China Five-Province Robotics Competition, Tianjin Division — Team Captain (2021)

SKILLSET

- **Languages:** English (IELTS 6.5; June 2026), Mandarin
- **Programming Languages**: Python (primary), C, C++, MATLAB
- **ML & Optimization**: PyTorch, scikit-learn, NumPy, SciPy, Pandas, OR-Tools
- **Engineering & CAE**: SolidWorks, Altair HyperMesh, Altair Radioss, Simulink, Altium Designer, Multisim
- **Tools & Environment**: Linux (Ubuntu), Git, ROS, LaTeX
